

Appendix 12

Investigative Audio Recording: Investigation into the Guangxi National hospital Urology transplant doctor Lu Guoping

(Download record: [MP3](#))

Following are excerpts from the recorded conversation between the WOIPFG investigator and Guanxi National hospital Urology transplant doctor Lu Guoping

Lu Guoping

Doctor Lu Guoping introduction: No 3. Affiliated Zhongshan Hospital
(Investigator, Lu: Lu Guoping)

Time: May 22, 2006

In 2008, the Chinese embassy in Canada released a TV program produced by Hong Kong Satellite TV in an attempt to deny the charges of live organ harvesting from Falun Gong practitioners.

In the program, Doctor Lu Guoping of Guangxi National Hospital's Urology Department admitted that he was the person who answered a phone call from a WOIPFG investigator on May 22, 2006, but denied the things he had said. However, Lu Guoping speaks with a distinct stutter and accent, and the phone interview is more than 30 minutes long. It couldn't have been fabricated. So, CCP's video which intended to disprove the phone recording turned out to be an implicating piece of evidence. This video was released by Chinese embassies and consulates. Therefore, Lu's admission of the authenticity of organ harvesting from Falun Gong has actually been confirmed by the CCP.

Investigator: hello, it's not them....

Lu: hello, yes....

Investigator: Doctor, I trust you very much, I trust you a lot. , They are all using organs from Falun Gong practitioners now, aren't they?

Lu: We don't have it any more. It is more restricted now.

Investigator: You used organ from Falun Gong practitioners before.

Lu: It's not the same as before anymore.

Investigator: Your hospital has used it before, right? They supply it to you, right? Since I know the surgery technique of the Guangxi National hospital is relatively good. That's to say, you used it before, why couldn't you use it anymore? I would like to ask if it is possible to find organs from Falun Gong? If you can find that, then I will come. Can you find it?

Lu: Let me tell you that we cannot get it. If you want to get it from Guangxi it will be more difficult. If you want to get it quickly, I suggest you to go to Guangzhou. They can

get organs very easily. They can search all over the country. When they are doing a liver transplant then can get a kidney for you in the meantime. So they can get an organ very easily. So a lot of places cannot get it, they only can ask them (Guangzhou) to get it.

Investigator: Tell me the one in Guangzhou. When you help me, I will thank you.

Lu: ok

Investigator: ah

Lu: ok. I will tell you and then I will tell you the phone number of the doctor from the other hospital.

Investigator: Which hospital is it?

Lu: I tell you the number. Please wait 30 seconds. I go to get the phone number.

Investigator: thank you, afterward I will thank you.

[waiting]

Lu: hello.

Investigator: hi

Lu: hello, hello

Investigator: yes, yes

Lu: First write down the number of the doctor. 13609038255

Investigator: 3825

Lu: 38255

Investigator: ah, 255. 13609038255

Lu: Yes, yes. It's the No. 3 affiliated hospital of Sun Yat-sen University.

Investigator: Is this from Guangzhou?

Lu: yes right

Investigator: No. 3 affiliated hospital of Sun Yat-sen University.

Lu: yes

Investigator: What is the name of the doctor?

Lu: Doctor Miao

Investigator: Miao what?

Lu: Miao Bing

Investigator: Is he from liver transplant?

Lu: From kidney transplant. Because the liver and kidney transplants are on the same floor. They are together.

Investigator: Ah, they are together. How can they easily get it? Why are you not able to get it?

Lu: Because they have a good name. Since they contact the justice system in the name of the whole school.

Investigator: So are the donor bodies they use from Falun Gong practitioners?

Lu: yes right

Investigator: ok

Lu: You can also use the kidney from your family, or use a kidney from a dead body.

Investigator: Yes but he said the organ from Falun Gong practitioner is healthier and better. Is it that they all use this type?

Lu: Yes, normally the healthy one is chosen for the transplant.

Investigator: I mean, is the donor body from Falun Gong practitioner healthier, is it that they all choose of this type?

Lu: Yes. For details you can call to tell him. You say you are introduced by the National hospital doctor Lu. He was my university fellow schoolmate.

Investigator: Oh, you are his schoolmate, your name is Lu? I can tell him about you.

Lu: yes, Lu.

Investigator: Lu is from Lu xun (A Chinese name)?

Lu: No. Lu is from Lu shan (A famous Chinese mountain).

Investigator: Lu from Lu shan.

Lu: Lu guoping. Guo is from country (In Chinese, country pronounce “Guo”), Ping is from Deng Xiaoping.

Investigator: Lu Guoping. Doctor Lu Guoping

Lu: When you call him and say you are introduced by me, he will help you. We are schoolmates.

Investigator: Yes. Afterward I will thank you.

Lu: Ok, you can contact him.

Investigator: Ok. Did he help you (find organs) before? Did he help you to find this type (Life organ)?

Lu: Yes, yes, yes, every week they have many shipments because they do a lot (transplants) they have their connections.

Investigator: ah, they have good connections.

Lu: Because in the mainland China, basically every hospital can do it. But why some hospitals don't do transplants? It's because they cannot get organs.

Investigator: ah, but only they (Guangzhou) can find it. Where should they go to find? Do they find it from local or other places?

Lu: All over the country they have their own suppliers.

Investigator: O they have suppliers all over the country. So...

Lu: They have a special team that is looking for it.

Investigator: I see. They are all looking for organs from Falun Gong practitioners? Those healthy ones?

Lu: yes, yes, yes.

Investigator: O, ok. Doctor Lu do you have mobile phone? Give me your mobile number. I can contact you in the future when there is something; introducing patients to you I can contact you.

Lu: Ok, 13607710447.

Investigator: 0447.

Lu: Right

Investigator: 13607710447.

Lu: I can contact him. He has it over there. Basically, they are all my friend.

Investigator: O they are all your friend. You know this patient is my family, She's my child, my daughter. I care a lot about her. Hope to find a healthy one. Your hospital is also using donor bodies from Falun Gong practitioners, isn't it? You used it before right, in 2001, in these years...

Lu: Yes we did, the point is that it's very hard to get...

Investigator: It was very easy to find before, isn't it?

Lu: For this thing you need to have connections in order to find it. You need to have connections and give money to all parties in order to get it. So the fee will be higher. They can get organs for wholesale price you know?

Investigator: Wholesale price? For example the ones you used before, where did you find it? Did they come from a detention center or from a prison?

Lu: From prisons.

Investigator: From prisons, those are all healthy ones from Falun Gong, aren't they? Healthy Falun Gong practitioners?

Lu: yes exactly, of course choosing the good ones. Because when doing such a thing quality has to be guaranteed.

Investigator: So it is to say you will choose it by yourselves?

Lu: yes

Investigator: So does your hospital do a lot?

Lu: Because our hospital cannot get it, so these few years basically we don't do it. Because they have a special room to do it, because they do a lot, know how to do it, you know? So they quality will be better.

Investigator: Ah, better quality. O, this type....

Lu: Because we do a few, we can do it however we do less this year.

Investigator: No, in 2001 it was very easy to find Falun Gong one. This type of supply body was easy to find.

Lu: No, now it is like this. You can go to contact them.

Investigator: It's easy to find over there, when I go, I just need to tell that you introduced me and they can find it, right?

Lu: Yes, right.

Investigator: Do you think they can find a donor body from Falun Gong for me?

Lu: IF you go there it shouldn't be a problem at all.

Investigator: They can find it?

Lu: I can tell you, it's an easy job for them to get organs.

Investigator: Easy job?

Lu: Since they do seven or eight liver transplants a week they can do over ten kidney transplants a week. Every month they do dozens of transplants. So they don't worry about getting organs.

Investigator: Did your schoolmates tell you he used the organs from Falun Gong practitioners, did he?

Lu: Some are from Falun Gong, some are donors from family.

Investigator: So it is to say, if I want to find one for my child, one from the Falun Gong, you think they can find it for me?

Lu: they can absolutely find it.

Investigator: They can find it? Your hospital did it before using donor bodies from Falun Gong, did you do a lot?

Lu: We did it before, but it is very hard to get. I've already told you, not every hospital

can get it. For this kind of thing you need to have connections. Now this kind of organ is in shortage. That's why some hospital can get it, and some not. It's because of this matter.

Investigator: They need to contact the court first? Or directly contact labor camps or detention centers?

Lu: Yes of course, this kind of thing it's not a hospital who can make the decision.

Investigator: So someone needs to give them money?

Lu: Yes you have to bribe them. How could it be that easy?

Investigator: Those donor bodies from Falun Gong, are they mostly male or female?

Lu: Normally, they have both male and female; they will choose one according to your matching.

Investigator: I know. What are their ages in between?

Lu: Normally, around their thirties.

Investigator: Around their thirties. Like you, you need to go to the prison to choose?

Lu: Yes of course, need to select.

Investigator: If you select and they don't allow you to take a blood sample, what then?

Lu: They will absolutely allow it.

Investigator: How would they allow?

Lu: There are inspectors. What are you afraid to? There is no need for you to worry about this kind of thing, they have their operations.

Investigator: Will they know they will be organ donors, do they?

Lu: They don't know

Investigator: They don't know? You just don't let them know? When they know they don't let people take blood samples?

Lu: yes, yes, yes.

Investigator: But how will you convince him, he would say what you are taking blood samples for? What will you say?

Lu: They will have their way. This isn't something for you to worry about. What you can do is just stay in the hospital and pay all the fees. You don't have to worry about other things.

Investigator: I'm afraid they cannot find a donor body from Falun Gong. I worry about this.

Lu: I can tell you, if they cannot find it, basically others cannot find is as well.

Investigator: Oh, that is to say they can find this kind of donor body from Falun Gong practitioners.

Lu: If they could not find it, almost nowhere can find one.

Investigator: Oh, I see. You mean that they surely can get organs from Falun Gong practitioners.

Lu: I would not recommend you to go there if they couldn't find one.

Investigator: So when I prepare the money I can go to there. Then I say I'm introduced by you.

Lu: Ok, I need to go to carry out a surgery.

Investigator: If there is anything I will contact you anytime.

Lu: Fine

Investigator: Thank you. Thank you very much for helping me. Goodbye
