

## **Statement by Professor Sidick quoted in media**

"Professor Erkin Sidick, a senior optical engineer in space optics who maintains indirect contact with high-level Chinese government officials, explained to me the ghoulish mechanics of China's Muslim organ harvesting program. *"The CCP transported and dispersed more than 1 million Uyghurs to various Han provinces first, then divided them into different groups. One group is for organ harvesting, another for biological experimentation, and others for other purposes, such as distributed killing. The CCP has run out money to maintain their vast concentration camps, and is resorting to these kinds of means. I constantly get info from high level government officials through several middle men, but it has been impossible for me to make my info official because doing so will put some people in danger, including those government officials,"* said Sidick.

## **Additional statement from Professor Sidick**

The CCP transported and dispersed more than 1 million Uyghurs to various Han provinces first, then divided them into different groups. One group is for organ harvesting, another for biological experimentation, and others for other purposes, such as distributed killing. The CCP has ran out of money to maintain their vast concentration camps, and is resorting to this kind of means.
